

MVI AudioVisual \ Raw panel mode\ Camera systems

MVI AudioVisual from the Netherlands is a great example of what is possible with the SKAARHOJ controllers & SKAARHOJ Raw panel mode.

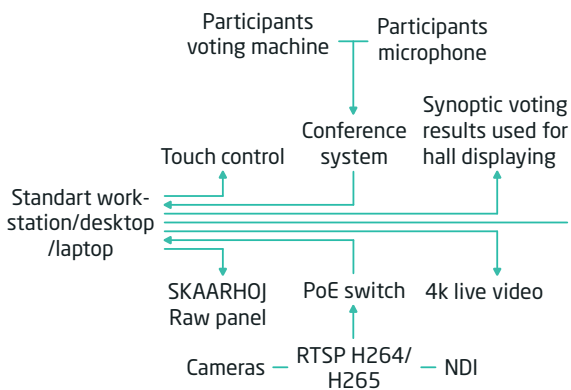

MVI AudioVisual provides solutions for the automation of conference and camera systems. They focus on software solutions, and their technology is in use in places such as the Irish, Mexican and Indian parliaments!

With their control system, they allow users to control the conference in a unified way, even when using systems from different brands.

To use their system to its full potential they have integrated with our SKAARHOJ controllers & Raw panel mode. Allowing them to cover the whole gamut of controls needed to broadcast political debates, and voting sessions. MVI AudioVisual especially loved the user experience, universal possibilities, professional feel, and PoE feature allowing them to work from any location in the building.

Overall MVI AudioVisual enjoyed the level of professionalism with which our SKAARHOJ controllers provide.
