

Switching \ OBS \ Lively

In the western part of Denmark, "Silkeborg Oasekirke" is livestreaming their service.

They use a SKAARHOJ Lively to ease operations for their volunteers. The controllers allows one operator to control a camera, while also switching sources, switching on graphics and start and stop the streaming in OBS.

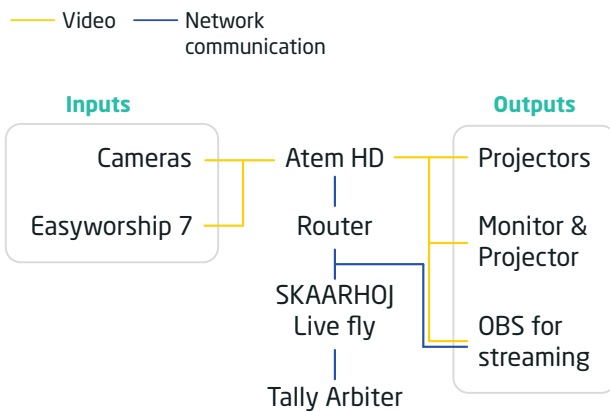

The setup has 6 cameras from different brands, and they are using a ATEM Television studio.

They also have graphics coming from EasyWorship and make use of preroll graphics in OBS.

Silas have been a volunteer in Silkeborg for many years, but he recently joined the SKAARHOJ team, where he is working with development of new features.

If you have any questions about this setup please write Silas at silas@skaarhoj.com
